Software engineering enthusiast with a strong interest in full-stack development and scalable backend systems. I build modern web applications using React, Node.js, Express, PostgreSQL, and Prisma, focusing on writing clean, maintainable code and delivering efficient, user-friendly solutions. Always eager to learn new technologies and improve as an engineer.

TECHNICAL SKILLS

Languages: C++, JavaScript, TypeScript, SQL, Python

Frontend: React.js, HTML5, CSS3, Tailwind CSS, Framer Motion, GSAP

Backend: Node.js, Express.js, REST APIs, JWT Authentication

Databases & ORMs: PostgreSQL, MongoDB, Prisma ORM, Redis

Developer Tools: Git, GitHub, Docker, Kubernetes, Postman, VS Code

Cloud & Deployment: Vercel, Render

Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

Interests: Full-Stack Development, Backend Engineering, Competitive Programming

EXPERIENCE

Technical Intern – Reliance JIO Infocomm Ltd.

May 2026 – Jun 2026

Built a document-based chatbot using **Python**, **FastAPI**, **React**, and **Gemini API**, enabling users to query PDFs and CSV/Excel files through contextual conversations with conversation history support.

- Implemented a multi-format document ingestion pipeline with text chunking tuned for chunk size and overlap, maximizing semantic retrieval quality via **ChromaDB**.
- Built a query rewriting module that reformulates vague user questions into precise retrieval queries, improving answer relevance across long and complex documents.
- Designed and documented RESTful APIs using **FastAPI**, integrating the backend with a **React** frontend to deliver a seamless question-answering workflow with conversation history persistence.
- Developed a full-featured admin dashboard for document upload, deletion, metadata management, and real-time monitoring of application settings.

PROJECTS

NeuroStack

React.js, Node.js, Express.js, PostgreSQL, Prisma, Tailwind CSS, Gemini API, Docker | GitHub

- Engineered a full-stack developer knowledge OS to centralize notes, code snippets, bug logs, and documentation, eliminating scattered knowledge across browsers, chats, and local files.
- Architected a secure backend with **Node.js**, **Express.js**, **PostgreSQL**, and **Prisma ORM**, implementing JWT auth, role-based access control, and scalable REST APIs with cookie-based session management.
- Designed a **Bug Journal** module for logging errors with root cause, solution, and tech tags, building a personal searchable debugging knowledge base to prevent re-solving the same issues.
- Built an interactive knowledge graph with **React Flow** to visually map relationships between notes, snippets, bugs, and concepts, enabling discovery of non-obvious connections across stored knowledge.
- Crafted a rich React frontend with **Framer Motion** and **GSAP** animations, advanced search, tag-based filtering, and streamlined CRUD workflows for a polished developer experience.
- Integrated a **Gemini**-powered AI assistant with persistent per-user chat history grounded in the user's own notes, snippets, and bug journal for memory-aware technical guidance.
- Containerized with **Docker** and **docker-compose** for reproducible local development; deployed on **Vercel** with environment-based configuration for production readiness.

Market Connect

React.js, JavaScript, Tailwind CSS, HTML, CSS | GitHub

- Developed the frontend of a responsive online marketplace connecting buyers and sellers with a clean, mobile-friendly interface for seamless product discovery and transactions.
- Architected client-side routing with **React Router DOM** across product listings, authentication, shopping cart, and user profile modules, delivering a fluid SPA experience with zero full-page reloads.
- Built a reusable React component library with consistent design patterns and clearly defined props interfaces, reducing duplication and enabling faster feature iteration.
- Implemented a functional shopping cart with state management for add, remove, and quantity updates, maintaining cart persistence across route changes within the session.
- Designed fully responsive layouts with **Tailwind CSS**, ensuring consistent UI rendering across desktops, tablets, and mobile devices following modern frontend best practices.
- Collaborated in an Agile team using **Git** and **GitHub**, participating in code reviews, resolving merge conflicts, and driving iterative UI improvements across sprints.

ContribFlow

React.js, Node.js, Express.js, PostgreSQL, Tailwind CSS | GitHub

- Designed and built a 4-stage open-source contribution platform at the **IBM BOB Hackathon**, guiding newcomers from project discovery through their first merged pull request in a gamified workflow.
- Implemented the full contribution pipeline — project discovery, issue selection, contribution submission, and PR review — with stage-gated progression enforcing a structured onboarding path.
- Built the backend with **Node.js** and **Express.js**, designing REST APIs for user progress, project metadata, and contribution records backed by **PostgreSQL**.
- Developed the **React.js** frontend with an intuitive dashboard visualizing contributor progress, surfacing beginner-friendly issues, and highlighting actionable next steps at each stage.
- Coordinated feature distribution across a four-member team under tight hackathon constraints, ensuring cohesive end-to-end functionality within the submission deadline.

EDUCATION

Dhirubhai Ambani University, Gandhinagar

B.Tech Information and Communication Technology with minors in Computational Science

2023 – 2027 (Expected)

CPI: 7.9/10

ACHIEVEMENTS

Reliance Foundation Scholar: Awarded the prestigious Reliance Foundation Undergraduate Scholarship for academic excellence and merit **LeetCode:** Solved 300+ DSA problems, strengthening problem-solving and competitive programming skills
